TEXAS A&M UNIVERSITY
Department of Computer Science & Engineering

Project 1 - Professional Presence

CSCE 315: Programming Studio
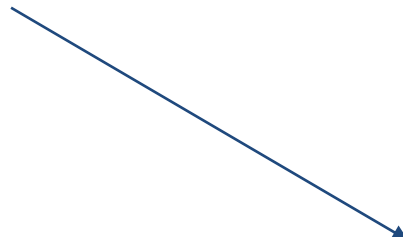

PROJECT 1 OVERVIEW

We will build a web page that projects the professional image you would like recruiters and organizations to see when you introduce yourself.

You will develop the web page on your local machine and host it on people.tamu.edu

PROJECT 1 OVERVIEW

Start here

Project 1 overview

The web page will start with a landing page. This page gives that first impression and draws a person in.

There will also be a small writing assignment tied to this project.

Detailed instructions on hosting will be given in lab.

Landing page - Make it good

The landing page is the first impression.
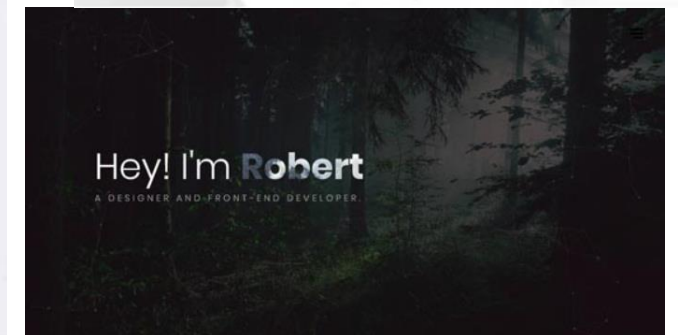

Other required pages

After the landing page create the following pages:

- About me
- Portfolio
- Technical Qualifications
- Service

One of the above pages needs to include a 300 word description of you and the page topic. (Resume is not included in the word count.) This will be peer reviewed and updated before the final grading. This is part of the writing requirement of the class.

- A secret page

About me page

In this page, include interesting things you would want a prospective employer or organization to know.

This is the team member they might be hiring.

The person behind the resume.

Portfolio page

In this page, include projects you have completed.

This can be in classes, internships, or on your own.

GitHub links, Web pages, thumbnails with descriptions, anything to show what you have done.

In the event you haven't done anything, describe what you want to fill your portfolio with before leaving college. (You will have 2 or 3 after this class!)

Qualifications page

In this page, include your technical abilities. At least write a small blurb about what areas you like.

You can embed your resume here. Make it easy to access, don't require someone to download a word or pages document.

The resume cannot count towards your writing requirement.

Service page

In this page, include your work in giving back to the community.

You can define your community as AggieLand, B/CS, Your hometown, organizations, Software development, etc.

This world provides boundless opportunities to help others, as others have help pave the way for us. How do you give back?

If you cannot come up with something, identify how you will contribute in the future.

A secret page

Create an empty folder with an "under construction" page.

Do not provide a link to this page on your site.

You will provide this link to us for this assignment and use it in a future assignment.

Peer review

At the appropriate time, have your 300 word description peer reviewed by your assigned reviewers.

Review the paragraphs assigned to you.

Give and take constructive criticism about your writing.

Incorporate the appropriate changes.

Only the final version will be graded.

You must write your paragraph and peer review to get credit.
